No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc., (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 and 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works or for resale. Copy fees for pre-1992 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

MADE IN THE UNITED STATES OF AMERICA

This journal is printed on acid-free paper.

CONTENTS OF VOLUME 117

Number 1, November 1992

Effects of Ethanol on Cocaine Metabolism: Formation of Cocaethylene and Norcocaethylene
Robert A. Dean, Edwin T. Harper, Natividad Dumaual, David A. Stoeckel, and William F. Bosron 1

Sertoli Cells Isolated from Adult 2,5-Hexanedione-Exposed Rats Exhibit Atypical Morphology and Actin Distribution
Eric S. Hall, Susan J. Hall, and Kim Boekelheide 9

Effect of Ozone on Platelet Activating Factor Metabolism in Phorbol-Differentiated HL60 Cells
James M. Samet and Mitchell Friedman 19

Physiologically Based Pharmacokinetic Model for Methanol in Rats, Monkeys, and Humans
Vicki L. Horton, Mark A. Higuchi, and Douglas E. Rickert 26

Acute Ozone-Induced Lung Injury in Rats: Structural–Functional Relationships of Developing Alveolar Edema
James F. Paterson, Michael D. Hammond, Mark R. Montgomery, John T. Sharp, Sean E. Farrier, and John U. Balis 37

Mercury Distribution in the Rat Brain after Mercury Vapor Exposure
Karin Warfvinge, Jianyi Hua, and Maths Berlin 46

Comparison of Cell-Permeable Calpain Inhibitors and E64 in Reduction of Cataract in Cultured Rat Lenses
K. J. Lampi, K. Kadoya, M. Azuma, L. L. David, and T. R. Shearer 53

Determination of Mutagenicity in Tissues of Transgenic Mice Following Exposure to 1,3-Butadiene and *N*-Ethyl-*N*-nitrosourea
Leslie Recio, Siv Osterman-Golkar, György A. Csanády, Max J. Turner, Brian Myhr, Owen Moss, and James A. Bond 58

Dietary 2,3,7,8-Tetrachlorodibenzofuran in Rainbow Trout: Accumulation, Disposition, and Hepatic Mixed-Function Oxidase Enzyme Induction
Derek C. G. Muir, Alvin L. Yarechewski, Donald A. Metner, and W. Lyle Lockhart 65

Rat Lung Metallothionein and Heme Oxygenase Gene Expression Following Ozone and Zinc Oxide Exposure
Greg Cosma, Helen Fulton, Tony DeFeo, and Terry Gordon 75

Biotransformation and Toxicity of Acetaminophen in Congenic RHA Rats with or without a Hereditary Deficiency in Bilirubin UDP–Glucuronosyltransferase
Sonia M. F. de Morais, Susanna Y. M. Chow, and Peter G. Wells 81

Methylene Dianiline: Acute Toxicity and Effects on Biliary Function
Mary F. Kanz, Lata Kaphalia, Bhupendra S. Kaphalia, Eleonora Romagnoli, and G. A. S. Ansari . . . 88

The Relationship between Nickel Chloride-Induced Peroxidation and DNA Strand Breakage in Rat Liver
Tammy J. Stinson, Sarah Jaw, Elizabeth H. Jeffery, and Michael J. Plewa 98

Sulfur Mustard-Induced Microvesication in Hairless Guinea Pigs: Effect of Short-Term Niacinamide Administration
Jeffrey J. Yourick, Jeffrey S. Dawson, and Larry W. Mitcheltree 104

Paraoxon Toxicity Is Not Potentiated by Prior Reduction in Blood Acetylcholinesterase
S. Padilla, V. C. Moser, C. N. Pope, and W. S. Brimijoin 110

Hydrolysis of Pyrrolizidine Alkaloids by Guinea Pig Hepatic Carboxylesterases
Stephen R. Dueker, Michael W. Lamé, and H. J. Segall 116

SHORT COMMUNICATIONS

Modulation of M1 and M2 Muscarinic Receptor Subtypes Following Repeated Organophosphate Exposure in Rats
Barbara B. Fitzgerald and Lucio G. Costa 122

Inhibition of Acute TCDD Toxicity by Treatment with Anti-Tumor Necrosis Factor Antibody or Dexamethasone
Michael J. Taylor, George W. Lucier, Joel F. Mahler, Morrow Thompson, Ann C. Lockhart, and George C. Clark 126

LETTER TO THE EDITOR 133

ANNOUNCEMENTS 134

Number 2, December 1992

CONTEMPORARY ISSUES IN TOXICOLOGY

Dendritic Cells and Cutaneous Immune Responses to Chemical Allergens
Ian Kimber and Marie Cumberbatch 137

REGULAR ARTICLES

Alterations in the Morphology and Functional Activity of Bone Marrow Phagocytes Following Benzene Treatment of Mice
Laureen MacEachern, Robert Snyder, and Debra L. Laskin 147

Mechanisms by Which Benzo[*a*]pyrene, an Environmental Carcinogen, Suppresses B Cell Lymphopoiesis
Janet A. Hardin, Fumihiko Hinoshita, and David H. Sherr 155

The Effects of 2,3,5-(Triglutathion-*S*-yl)Hydroquinone on Renal Mitochondrial Respiratory Function *in Vivo* and *in Vitro:* Possible Role in Cytotoxicity
Barbara A. Hill, Terrence J. Monks, and Serrine S. Lau 165

In Vitro and *in Vivo* Effect of Methyl Isocyanate on Rat Liver Mitochondrial Respiration
K. Jeevaratnam, S. Vidya, and C. S. Vaidyanathan 172

Dynamic Changes in the Distribution of the Calcium-Activated Neutral Protease in Human Red Blood Cells Following Cellular Insult and Altered Ca^{2+} Homeostasis
Anne M. Mortensen and Raymond F. Novak 180

Use of Cholinesterases as Pretreatment Drugs for the Protection of Rhesus Monkeys against Soman Toxicity
Alan D. Wolfe, Dennis W. Blick, Michael R. Murphy, Stephanie A. Miller, Mary K. Gentry, Stanley L. Hartgraves, and Bhupendra P. Doctor 189

An *in Vitro* Model for Assessing Muscle Irritation of Antibiotics Using Rat Primary Cultured Skeletal Muscle Fibers
Ikuo Kato, Akihiro Harihara, and Yukio Mizushima 194

Nephrotoxicity of the 1:1 Acrolein–Glutathione Adduct in the Rat
Joseph J. Horvath, Charlotte M. Witmer, and Gisela Witz 200

Dapsone-Induced Hemolytic Anemia: Effect of *N*-Hydroxy Dapsone on the Sulfhydryl Status and Membrane Proteins of Rat Erythrocytes
Scott J. Grossman, JoAnne Simson, and David J. Jollow 208

Local Application of Neuropathic Organophosphorus Compounds to Hen Sciatic Nerve: Inhibition of Neuropathy Target Esterase and Peripheral Neurological Impairments
Victoria Carrera, José Barril, Maricruz Mauricio, Maricruz Pellín, and Eugenio Vilanova 218

Examination of Potential Mechanism(s) of Metallothionein Induction by Diethyl Maleate
J. W. Bauman, Y. P. Liu, G. K. Andrews, and C. D. Klaassen 226

Induction of Hepatic Metallothionein by Paraquat
John W. Bauman, Cherukury Madhu, James M. McKim, Jr., Yaping Liu, and Curtis D. Klaassen .. 233

Accumulation and Degradation of the Protein Moiety of Cadmium–Metallothionein (CdMT) in the Mouse Kidney
Catherine Dorian, Vincent H. Gattone II, and Curtis D. Klaassen 242

A Putative Lectin-Binding Receptor Mediates Cadmium-Evoked Calcium Release
Yueh-Chu Chen and Jeffrey Bingham Smith 249

INFORMATION FOR AUTHORS

Toxicology and Applied Pharmacology publishes original scientific research pertaining to action on tissue structure or function resulting from administration of chemicals, drugs, or natural products to animals or humans. Manuscripts should address mechanistic approaches to physiological, biochemical, cellular, or molecular understanding of toxicologic/pathologic lesions and to methods used to describe these responses. Papers dealing with alternatives to the use of experimental animals are encouraged.

A limited number of short reviews on subjects of timely interest to toxicologists will be considered as part of the section on Contemporary Issues in Toxicology. Communications, Announcements, and Letters to the Editor are discussed below.

Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript handling fee. The Society of Toxicology has established that a manuscript handling fee of $100.00, payable to the Society of Toxicology in United States currency, must accompany the original submission of the manuscript. The name(s) of the author(s) and the title of the manuscript must be included in the check identification information. In the event that this fee cannot be met by the authors or their institution, an explanatory letter must be sent to the Editor with the manuscript. The editorial decision regarding eventual acceptance or rejection of the manuscript will be independent of the submission of the handling fee.

Submission of manuscripts. All manuscripts should be submitted to: *Toxicology and Applied Pharmacology*

Editorial Office
Third Floor
1250 Sixth Avenue
San Diego, California 92101
Telephone: (619) 699-6469
Fax: (619) 699-6859

Form of manuscript. Manuscripts should be submitted in quadruplicate (one original and three photocopies), in English, including four sets of figures. All copies of halftone photographs and electron micrographs *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. Papers in French or German can be considered for publication: authors should contact the Editor prior to submission. All manuscripts must be typewritten, double-spaced (including references) on one side of 8.5 × 11 in. white paper with 1 in. margins on all sides. Dot matrix printers should not be used.

Page 1 should contain the article title, the names and affiliations of all authors, an abbreviated form of the title (not to exceed 55 characters including letters and spaces) and the name, telephone number, and complete mailing address of the person to whom all correspondence should be sent. The article title should be comprehensive and descriptive: proprietary names must not be used in titles, but may be identified in footnotes.

Page 2 should contain an abstract starting with the title of the paper, followed by the authors' names and reference to ***Toxicology and Applied Pharmacology***; blanks should be left so that the Editor may fill in the volume and page numbers. The abstract will be limited to 250 words but must contain a concise summary of what was done, the results obtained, and valid conclusions which are drawn therefrom. It must mention the compounds or families of compounds studied, their actions, and the species of animals. It must contain important words which are used as index terms, but not proprietary names.

Example: A Biologically Based Toxicokinetic Model for Pyrene in Rainbow Trout. LAW, F. C. P., ABEDINI, S., AND KENNEDY, C. J. (1991). *Toxicol. Appl. Pharmacol.* **110**, 390–402.

Format. The following text sections should be used.

Introduction. State why the investigation was carried out, note any relevant published work, and delineate the objective of the investigation.

Methods. New methods or significant improvements of methods or changes in old methods must be described. Methods for which adequate reference can be cited are not to be described. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described: if an accepted code of practice has been followed, a reference to the relevant standards should be given. Details regarding animal housing conditions should be given.

Results. Duplication between the text of this section and material presented in tables and figures should be avoided. Tabular presentation of masses of negative data must be avoided and replaced with a statement in the text whenever possible. The statement must include (a) what was done, (b) how it was done, (c) how the data were analyzed, (d) a measure of variability, and (e) the significance of the result.

Discussion. This section must relate to the significance of the work to existing knowledge in the field and indicate the importance of the contribution of this study. Needless detailed recapitulation of the results must be avoided. Unsupported hypotheses and speculation should be omitted.

References. Names of authors are to be cited in the text with the year of publication in parentheses. When there are more than two authors use the first author's name followed by *et al.* All papers mentioned in the text must be listed in the reference list and vice versa. References should be listed alphabetically typed double-spaced on a separate sheet at the end of the paper with all authors included. Journal titles should be abbreviated according to *Chemical Abstracts Service Source Index,* 1985. Note the following styles for references.

Cole, R. J., and Cox, R. H. (1981). *Handbook of Toxic Fungal Metabolites.* Academic Press, New York.

Randall, C. (1977). Teratogenic effects of *in utero* ethanol exposure. In *Alcohol and Opiates* (K. Blum, Ed.), pp. 91–107. Academic Press, New York.

Shain, W., Bush, B., and Seegal, R. (1991). Neurotoxicity of polychlorinated biphenyls: Structure–activity relationship of individual congeners. *Toxicol. Appl. Pharmacol.* **111,** 33–42.

Footnotes should be identified in the text by superscript Arabic numerals and cited consecutively throughout the paper. All footnotes should be listed in order typed double-spaced on a separate sheet. Proprietary names of substances and names and addresses of suppliers should be identified in footnotes. If the paper has been presented orally in whole or in part, the date, and occasion should be included in a footnote.

Tables must be typed double-spaced on a separate sheet with the title typed directly above the table. Do not use abbreviations in the title. The title and footnotes must contain all the information necessary to understand and interpret the table without reference to the text. Tables must be numbered consecutively with Arabic numerals. Footnotes to tables should be identified by superscript lowercase *italic* letters and placed at the bottom of the page containing the table. Letters should be assigned to table footnotes alphabetically in order of appearance as the table is read *horizontally,* not vertically.

Figures should be numbered consecutively with Arabic numerals. All legends are to be typed consecutively on a separate sheet. All figures should be planned to fit the proportions of the printed page ($7\frac{1}{8} \times 9$ in.; column width, 3.5 in.); wherever possible, figures will be reduced to single-column width. Lettering on the original figure should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to be legible after reduction of the figure to single-column width (approximately 50 to 60%). *Differences in type size within a single figure should be no more than approximately 15%*. Freehand, penciled, or typewritten lettering is not acceptable. Drawings should be made with the equivalent of black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. *In addition, symbols used to identify points within a graph should be large enough that they will be easily distinguishable after reduction.* Graphs should be plotted with black India ink on blue coordinate or white paper no larger than 8.5×11 in. Grid lines that are to show must be inked in black.

All copies of halftone photographs and electron micrographs *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process. Photographs must be kept to a minimum. Photographs should be glossy prints (5×7 or 8×10 in.). Overlays indicating the parts of the electron micrographs that are to be emphasized must be used. Electron micrographs should be submitted not larger than 6.5×4.5 in. Magnification should be indicated by a bar on the photograph. Illustrations in color can be accepted only if the authors defray the cost.

Identify all figures on the back, in *pencil,* with authors' names and figure number, and indicate the TOP.

Index terms suitable for use in the subject index must be submitted on a separate sheet. The list should include chemical name, generic name, common name, and may include proprietary name of each important substance used in the experiments. It should also include biological activity of each substance investigated. Terms should elucidate important relationships.

Nomenclature. For styling of isotope, enzyme, and biochemical nomenclature, consult the extended Instructions to Authors published in each January issue of *Archives of Biochemistry and Biophysics.*

Abbreviations. Units will be in general accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Periods are not used after abbreviations (note exceptions, e.g. in. for inches).

Common abbreviations to be used in this journal are:

m	meter	ppm	parts per million
cm	centimeter	cpm	counts per minute
mm	millimeter	dpm	disintegrations per minute
μm	micrometer	sc	subcutaneous
nm	nanometer	ic	intracutaneous
kg	kilogram	im	intramuscular
g	gram	ip	intraperitoneal
mg	milligram	iv	intravenous
μg	microgram	po	oral
ng	nanogram	LD50	median lethal dose
ml	milliliter	LC50	medial lethal concentration
μl	microliter	Hz	hertz
mol	mole	°C	centigrade
M	molar	sec	seconds
mM	millimolar	min	minutes
μM	micromolar	hr	hours
N	normal	SD	standard deviation
Ci	Curie	SE	standard error
$\bar{x}$	mean	TLV	threshold limit value

Reprints. A reprint order form will accompany the proofs. Fifty reprints of each article (without covers) are supplied free of charge.

Personal computer disks. Manuscripts may be submitted to *Toxicology and Applied Pharmacology* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 1250 Sixth Avenue, San Diego, California 92101; telephone: (619) 699-6415; fax: (619) 699-6800).

Communications. ***Toxicology and Applied Pharmacology*** will accept a limited number of brief reports of work that has progressed to the stage at which it is considered that the science of Toxicology would be advanced if the results were made available as soon as possible. These reports will be designated "Communications." Authors should submit short papers for this category of publication only when they believe that the rapid communication of the results is of the utmost importance to other investigators. The manuscript must be submitted in quadruplicate and conform strictly to the form and style of the journal. The length must be such that it will require no more than three pages in the present format of the journal, approximately 2500 words total.

Letters to the Editor. Letters to the Editor will be accepted for publication subject to Editorial Board approval, provided that the content deals with papers published in *Toxicology and Applied Pharmacology* and that the comments are of scientific value. Letters should be received within two months of mailing of the journal and should be no longer than 250 words. Introduction of new data will not be permitted. Each letter will be submitted to the author of the original paper in order that any reply may be published simultaneously with the letter.

Announcements: *Toxicology and Applied Pharmacology* will accept for publication announcements of interest to toxicologists such as notices of society meetings, symposia, or other matters.

For information about advertising in *Toxicology and Applied Pharmacology*, please contact Greta Simpson, Advertising Coordinator, Academic Press, Inc., Journal Promotion Department, 1250 Sixth Avenue, San Diego, California 92101 (fax: (619) 699-6800).

TENURE TRACK POSITION

Junior tenure track faculty position in environmental toxicology to develop an independent research program, and to teach-advise Environmental-Public Health graduate students. Earned doctorate necessary and preferably at least two years of postdoctoral experience. Send curriculum vitae; a summary of research interests, past research-teaching accomplishments, and future research plans; three publications; and the names, addresses, telephone/fax numbers of at least three references by January 15, 1993 to:

Dr. Shane Que Hee
Vice Chair
Department of Environmental Health Sciences
UCLA School of Public Health
10833 Le Conte Avenue
Los Angeles, CA 90024-1772

The University of California is an Equal Opportunity/Affirmative Action Employer. Women and Minorities are encouraged to apply.

Experimental and Molecular Pathology

Editors
Frederick Coulston
White Sands Research Center, Alamogordo, New Mexico
Wilbur A. Thomas
Albany Medical Center, New York

Managing Editor
Sean Moore
McGill University, Montréal, Québec, Canada

Experimental and Molecular Pathology presents articles on disease processes in relation to structural and biochemical alterations in mammalian tissues and fluids and on the application of the newer techniques of analytical chemistry, histochemistry, pharmacology, toxicology, and electron microscopy to problems of pathology in humans and animals. The journal also includes studies on the mechanism of action of drugs, vaccines, and pyrogens, among other topics, when related to alterations in tissue.

Research Areas Include
- Chemotherapy
- Endocrinology
- Geographic pathology
- Immunology
- Nutrition
- Virology

Volumes 58-59 (1993), 6 issues
ISSN 0014-4800
In the U.S.A. and Canada: $368.00
All other countries: $441.00

Sample copies and privileged personal rates are available upon request.

Managing Editor

Frank C. Lu, Miami, Florida

Biomedical and Environmental Sciences, an international journal with special emphasis on scientific data and information from China, publishes regular articles, review articles, and important reports dealing with biologic and toxic effects of chemicals, drugs, natural products, and physical agents on man, plants, and animals.

Research Areas Include

- The relationship of environmental pollutants and contaminants to their ecological and ecotoxicological effects
- The entry, transport, and fate of natural and anthropogenic chemicals in the biosphere and their impact on human health
- International scientific problems and public health aspects of toxicology, pharmacology, microbiology, and pathology
